

MAXWELL COOPER

SOFTWARE ENGINEER

+1 (443) 841 5751 ✉ maxwellcharlescooper@gmail.com 🌐 maxwellcharlescooper.github.io/ 📍 Brooklyn

PROFILE

Software engineer with particular experience in frontend technologies, specifically using Typescript to build React apps for early-stage startups. Special emphasis on UI/UX design and execution, as well as general app management including DevOps and debugging.

EDUCATION

BROWN UNIVERSITY

2014-2018

Electrical Engineering, Sc.B.

HEREFORD HIGH SCHOOL

2010-2014

GPA: 4.0

TOWSON UNIVERSITY

2013

Multivariable Calculus (MATH275)

GPA: 4.0

SKILLS

LANGUAGES

TypeScript, JavaScript, HTML, CSS, SQL, Python, Java, MATLAB

TECHNOLOGIES

React, Node.js, PostgreSQL, Docker, Next.js, Tailwind CSS, Git, Jira, AWS (EC2, CloudFront, RDS, Lambda, CodePipeline, CloudWatch), Jest, Selenium, Figma, Adobe InDesign

TESTS

SAT: 2340 ACT: 34

SAT II: Chem 800, Math II 800,

Physics 780

EXPERIENCE

ZEALTHY

Full Stack Software Engineer, 2024-2025

- Drove platform growth to 100,000+ monthly active users and ~\$400,000 daily revenue by delivering scalable systems supporting increased traffic, operational uptime, and product velocity; built on Next.js
- Launched new products (ED, Liraglutide), integrating with external pharmacy APIs and building prescription, subscription, and refill logic from scratch
- AB tested changes to flow logic and design using VWO, including split-url
- Built event logic to integrate with customer.io in order to launch campaigns targeting specific subgroups of the customer base
- Elevated platform security by designing role-based access with custom claims and enforcing fine-grained RLS across 100+ PostgreSQL tables housing sensitive clinical/patient data
- Integrated messaging platform with OpenAI to speed up clinician workflow

PINION

Frontend/Full Stack Software Engineer, 2023-2024

- Built main content page and routes for civic engagement app in React/TypeScript
- Determined best flow of async data fetching to improve latency by 15%
- Working from Figma designs, fleshed out components and picked out design aspects for better user experience

INFONDRIAN

Founding Frontend/Full Stack Software Engineer, 2020-2023

- Built and designed SPA for cloud-based radiation oncology chart-checking SaaS startup from 0 to 1 using React with TypeScript
- Styled reusable components using styled-components and Material UI for better consistency and scalability as the app expands
- Optimized application performance by reducing unnecessary re-renders caused by hooks, improving API call structure, and transitioning from D3-based library Recharts to vanilla D3
- Designed and built real time visualization module utilizing Socket.io and Redis to provide error-checking to medical physicists within a convenient workflow
- Created SQL queries with Sequelize for API routes as well as AWS Lambda functions on a separate repository that execute ETL functions on the database
- Architected entire frontend CI/CD pipeline with GitHub trigger from dev to prod including testing stage using AWS CodePipeline
- Set up authentication for React app using Auth0 and reduced company costs by later transitioning to a custom login page with Amazon Cognito
- Created initial iteration of on-prem secondary API in Python to anonymize PHI for HIPAA compliance

INTUS CARE

Founding Frontend Software Engineer, 2019-2020

- Rapidly prototyped frontend of a caregiver management application for a Brown startup company, a finalist of the Brown Venture Prize and 2019 MassChallenge winner
